Seems to be a perfect desktop computer, until the warranty expires...

October 19, 2017

I had one of these. The most expensive one. After three years it stops working. Dell would not fix it anymore ("... the system is too old, we do not have the necessary components."). I was told to try some computer shops repairs centers. Nobody could fix it. So now I have very-very expensive LCD panel.

From Dell

Overview

Uncompromised, high-end performance.

A stunning display that's simply captivating.
